Crisis Phase Impact Dashboard

Overview

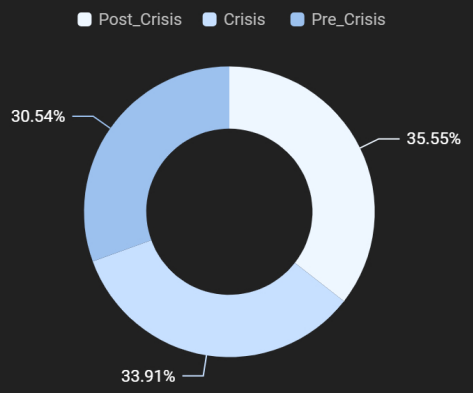
Shows crisis phase comparisons for a single main category, highlighting level changes across phases and quantifying the shock's magnitude and percent impacts. It emphasizes before, during and after differences to assess recovery and net effect.

Overall Insights

- Phase distribution is balanced: Post crisis 35.6%, Crisis 33.9%, Pre crisis 30.5%, so no single phase dominates (spread 5 percentage points).
- Category P9119.4 is the primary driver of dynamics: values rise from 5.26M (Pre) to 5.84M (Crisis) to 6.12M (Post).
- Post-crisis value for P9119.4 is 16.4% higher than Precrisis, indicating net growth beyond recovery.
- A one off shock of 580.8K is entirely concentrated in P9119.4 other categories show negligible shock impact.
- Recovery magnitude (863.5K) exceeds the crisis decline (580.8K) for P9119.4, producing a net positive change.
- Combined crisis plus recovery movement for P9119.4 is 1.44M, a substantial shift relative to its Precrisis level.
- Overall system resilience: despite a concentrated shock, the aggregate phase shares remain relatively stable and shift toward Postcrisis.

Shock Impact	Post-Crisis Level	Crisis Level	Change Post vs Pre
580,805	6,124,802	5,842,086	863,521

Phase Share Distribution



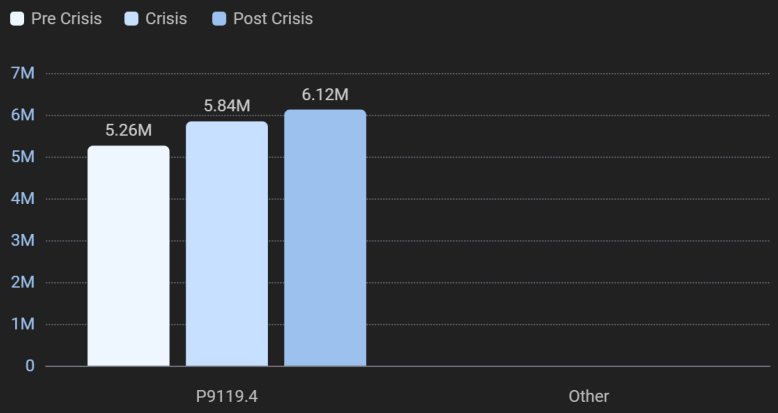
Key Insights

- Post crisis holds the largest share (35.6%), slightly ahead of Crisis (33.9%) and Precrisis (30.5%)
- The distribution is relatively balanced across phases, with no single phase overwhelmingly dominant (spread 5 percentage points)

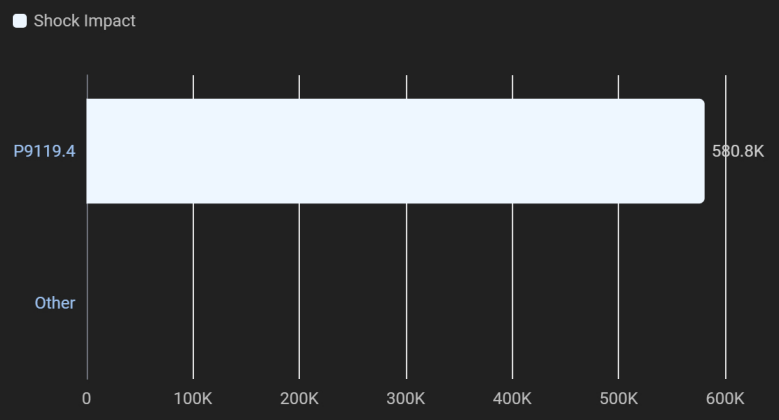
Key Insights

- The category P9119.4 shows a steady increase across phases: Pre ≈5.26M → Crisis 5.84M → Post 6.12M
- Postcrisis value is 16.4% higher than Precrisis, indicating net growth beyond recovery of losses

Phase Comparison by Category



Shock Impact by Category



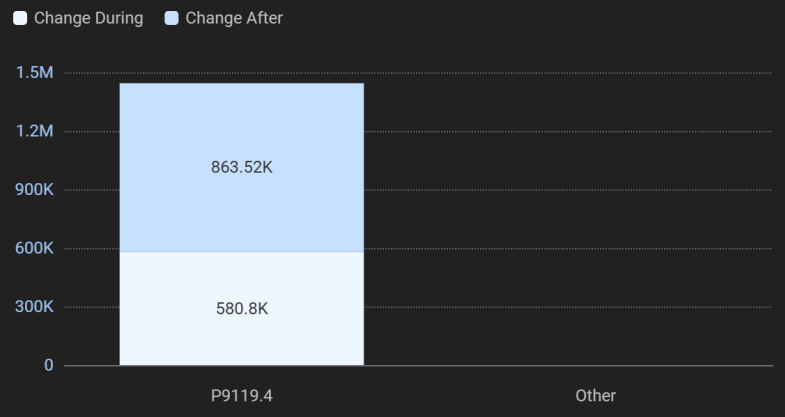
Key Insights

- P9119.4 accounts for the full reported shock impact (580.8K); other categories show negligible recorded shock
- The shock represents a notable oneoff impact concentrated in a single category rather than spread across categories

Key Insights

- Recovery after the crisis (863.5K) exceeds the change during the crisis (580.8K), indicating more rebound than initial decline
- The combined change (during + after 1.44M) shows a substantial net movement relative to Pre values for P9119.4

Crisis and Recovery Change vs Pre



Trajectory Across Crisis Phases

Largest Shock Impacts

Main Category	Shock Total	Percent Of Pre
P9119.4	580805	11.0%

Phase Changes Summary

Main Category	Change During	Change After	Recovery From Crisis	Percent Recovery
P9119.4	580805	863521	282716	48.7%

Top Categories by Post-Crisis Level

Main Category	Post Total	Pre Total	Crisis Total	Net Change Post Vs Pre	Percent Change Post Vs Pre
P9119.4	6124802	5261281	5842086	863521	16.4%
